Professional Summary

Graduate Software Engineer and Full-Stack Developer with hands-on experience building role-based web applications, REST APIs, data-driven platforms, and AI-enabled products. Proficient in **Next.js, React, Astro.js, TypeScript, Node.js, FastAPI, PostgreSQL, and MongoDB**, with practical experience in Git workflows, Docker, AWS services, technical documentation, and collaborative problem-solving.

Technical Skills

Languages: JavaScript, TypeScript, Python, C++, Familiar with PHP and Java

Frontend: React, Astro.js, Next.js, HTML5, CSS3, Tailwind CSS, shadcn/ui, Performance Metrics, responsive UI development

Backend: Node.js, Express.js, FastAPI, Laravel, REST APIs, RBAC

Databases & Cloud: PostgreSQL, MySQL, MongoDB, Prisma, AWS (EC2, S3, Lambda, DynamoDB, RDS, EFS), Docker, Linux

AI & Data: RAG, TensorFlow, Scikit-learn, Pandas, NumPy, NLP

Tools & Practices: Git, GitHub, Postman, Agile, System Design and Architecture, Testing, Documentation

Experience

ITSOLERA

Remote

Full-Stack Intern - Winter Internship Program

Jan 2026 - Apr 2026

- Earned recognition as a **top-performing intern** while delivering two full-stack projects: an administration panel and an RBAC application using MERN, Next.js, FastAPI, and SQL/NoSQL databases.
- Applied problem-solving and technical communication to implement authentication, authorization, middleware, and maintainable database workflows.

ACT International (Aiming Change for Tomorrow)

On-site

Software Engineer Intern - Laravel Consultant Roster System

Jul 2025 - Aug 2025

- Developed a role-based consultant management system using PHP/Laravel and MySQL to centralize consultant records, administrative workflows, and access-controlled user management.
- Implemented four core capabilities - authentication, dashboards, validation, and database persistence - improving system structure, security, and maintainability.

Education

FAST National University of Computer and Emerging Sciences (FAST-NU)

Islamabad, Pakistan

BS Software Engineering

Aug 2022 - Jun 2026

Bronze Medalist (Fall 2025) | Dean's List (Fall 2022 - Spring 2026) | **CGPA: 3.65/4.00**

Relevant Coursework: OOP, Data Structures and Algorithms, Operating Systems, DBMS, Software Architecture, DevOps, NLP, Applied AI

Web & Full-Stack Projects

MindMesh - Final-Year Project

2025 - 2026

Full-Stack AI Workspace

GitHub

- Engineered an AI-enabled workspace with five core modules - Wiki, Table, Board, Calendar, and Timeline - using Next.js, TypeScript, Prisma, and PostgreSQL.
- Integrated four FastAPI-powered workflows: transcription, summarization, action-item extraction, and retrieval-augmented document search.

Momentum Habit Tracker

2026

Full-Stack Web Application

Live | GitHub

- Implemented four productivity features - daily check-ins, streak tracking, statistics, and weekly progress visualization - using Next.js App Router, TypeScript, Prisma, PostgreSQL, and Zod.
- Configured Vercel preview deployments to support iterative testing and release validation.

NLP BizMatch

2025

Digital Services Marketplace

Live | GitHub

- Developed a Next.js digital-services marketplace with seven workflows: buyer briefs, provider profiles, listings, matching, scoring, shortlisting, and comparison.
- Structured marketplace data and user flows to support clearer service discovery and provider evaluation.

Shuffl

2025

One-Day Project Idea Generator

Live | GitHub

- Built a lightweight project-idea generator that recommends ideas by domain, difficulty, and preferred technology stack through a minimal interface designed to reduce decision paralysis.

Allama or a Llama

2026

Interactive Guessing Game

Live | GitHub

- Developed an interactive browser game with responsive UI, scoring, and sound effects in which players identify whether a couplet belongs to Allama Iqbal or a llama-themed alternative.

AI & Machine Learning Projects

Meeting Transcription & Summarization Pipeline

2026

Final-Year Project Module

- Built a FastAPI transcription and summarization pipeline with timestamps, speaker diarization, action-item extraction, Google Drive integration, and connectivity to the broader MindMesh workflow.

Stock Market Time-Series Predictor

2025

ARIMA vs. LSTM

- Compared ARIMA statistical forecasting with LSTM sequence modelling for time-series prediction using AAPL and BTC-USD datasets.

Ask Mindy the AI

2026

RAG Document Assistant

- Developed a retrieval-augmented generation assistant that retrieves relevant document context before generating grounded answers with cited source references.

EmpathAI

2025

Emotion-Aware Chatbot

- Built an emotion-aware chatbot using BERT and LSTM models for sentiment analysis, mood tracking, and adaptive dialogue responses based on detected emotion.
